Colton Hagan — Résumé

Oct 17, 2026 · @Colton

Full Stack Developer — Ruby on Rails · React · TypeScript

Spokane, WA (open to remote) · (480) 293-4674 · coltonhagan@gmail.com · github.com/thisguycolton · Portfolio: colton.hmblbot.com

Summary

Full stack developer with 10+ years of Ruby on Rails who builds and ships complete products on my own: backend, frontend, payments, mobile apps and deployment. Most recently I built two production platforms: metr., ride booking with Stripe Connect payments, live ride tracking and native iOS and Android apps; and RecoveryBot, for running 12-step recovery groups. I've led small teams, worked directly with clients and founders, and explain technical tradeoffs in plain language.

Experience

Founder & Full Stack Developer — HMBLBOT · Remote · Jan 2023 – Present

metr. — ride booking for independent drivers (Rails 8, Inertia, React, TypeScript, PostgreSQL) - https://metr.hmblbot.com

- Built metr. alone: drivers get their own booking page and QR code, and riders book them directly instead of through Uber or Lyft.
- Built card payments on Stripe Connect: each driver's own account, a hold on the rider's card when the driver accepts, capture at drop-off, tips, and webhook handling for failures and disputes.
- Added a paid Pro plan with Stripe Billing (Checkout, customer portal, subscription webhooks).
- Shipped iOS and Android apps with Capacitor, including a custom native plugin for Mapbox turn-by-turn navigation and push notifications through APNs and FCM.
- Built live ride tracking: driver location, traffic-aware ETAs, in-ride chat and calls, and ride stages from "on the way" to drop-off.
- Built fare quotes from Mapbox and OpenRouteService routes, Twilio text alerts, live flight and airport data, and Ticketmaster and Eventbrite event imports.

- Built a mileage and expense log that totals each driver's IRS deduction and exports a CSV for taxes.
- Wrote 438 automated tests; TypeScript and RuboCop checks; deployed with Docker on a self-hosted CapRover server.

RecoveryBot — a platform for running 12-step recovery groups (Ruby on Rails, React, Vite, Tailwind CSS, Tiptap, Docker) · recoverybot.hmblbot.com

- Launched as aa.humblebot.io in under 3 months with no outside budget, then rebranded it as RecoveryBot and grew it from a literature tool into a full platform for running groups.
- Built a reading library of recovery books with search across every book, a chapter reader, shareable highlights with Markdown notes, and an admin book and chapter editor.
- Built group management: memberships, meetings linked to the AA Intergroup directory, group home pages built in a custom Tiptap-based page editor, and court-verification forms and emails.
- Built tools for group business: bylaws and policies as live documents with PDF export and Word and RTF import, a decision log, and business-meeting agendas and minutes with quorum tracking. Records are checked against Robert's Rules, such as a motion with no second.
- Built treasurer's reports with the prudent reserve and the split, officer terms with rotation reminders, and host scheduling for 28 weekly meetings with open-spot flags and one-day covers.
- Added profiles, follows and timeline posts, a public meeting finder (by day, time, place and type), and schedule polls that rank the best times on a vote heat map.
- Built an admin suite with analytics, user management, and review of problems readers report in the text; added a notification center and toast messages.
- Deployed with Docker on CapRover; moved front-end builds off the server to fix out-of-memory deploys.

Full Stack Developer — Realana · Phoenix, AZ · Oct 2017 – Oct 2018

- Built investor dashboards in Rails and JavaScript for Opportunity Zone real estate projects.
- Built a Rails API that gathered and cleaned public geospatial data (Data.gov, USGS).
- Built map tools on PostGIS for checking zoning and site fit.
- Presented technical and GIS findings to investors in client meetings.

Team Lead & Full Stack Developer — PingZing · Mesa, AZ · 2015 – Mar 2017

- Led development of an Uber-style app matching home buyers with real estate agents, from idea to production.
- Built the Rails API: Google Maps geo-matching, Stripe payments and Twilio text messaging and chat.
- Worked with the mobile developers (Ionic and Android) to keep the apps and the API in step.

Full Stack Developer — ChuZum · Gilbert, AZ · 2013 – 2015

- Built and launched a social media platform in five months: Rails APIs, front end and deployment.
- Deployed on Heroku and AWS (EC2, S3, SES); designed the brand and interface.

Skills

- **Back end:** Ruby on Rails (10+ years), Ruby, PostgreSQL, PostGIS, REST APIs, background jobs, webhooks, Minitest
- **Front end:** React, TypeScript, JavaScript, Inertia.js, Vite, Tiptap, Vue.js, Tailwind CSS, HTML and CSS, responsive and accessible UI
- **Mobile:** Capacitor (iOS and Android), native push notifications (APNs, FCM)
- **Payments and APIs:** Stripe (Connect, Billing, Checkout), Twilio, Mapbox, Google Maps, OpenRouteService
- **Infrastructure:** Docker, CapRover, Heroku, AWS (EC2, S3, SES), Git and GitHub, CI/CD, DNS and SSL
- **Product:** requirements gathering, feature planning, UI design (Photoshop, Illustrator), working directly with clients and founders

Other Experience

Job Manager — Fountain Hills Roofing (family business) · Fountain Hills, AZ

- Led the company rebrand and built fhroof.com, with a lead form that routes requests straight to the sales team.
- Moved the books from QuickBooks to Zoho Books and automated invoicing.
- Ran job logistics, materials ordering and crew scheduling.

Lead Designer & Stage Manager — My Media Tape · Phoenix, AZ · 2017 – Mar 2018

- Ran design, audio and stage production for six sold-out live shows.
